

AKGEC SKILLS FOUNDATION

Training Program Details

CENTRE NAME- SIEMENS Product Lifecycle Management (PLM)

Training/Course Title:	SIEMENS NX–CAD/CAM/CAE	
Target Audience:	B.Tech Students	
Fee:	7000/-	
Duration:	80 Hrs.	
Module	• Introduction to NX interface, environment setup and file management • 3D part modelling: features, operations, design intent • Drafting, detailing, and Assembly modelling: constraints, relationships, interference checks and exploded views • CAM operations: toolpath creation, cutter selection, machining strategies and simulation • Post-processing and CNC program generation for manufacturing • Introduction to CAE: meshing, boundary conditions and basic structural analysis • Project-based design workflow: modelling, simulation, validation.	
Outcome:	• Gain proficiency in NX tools for effective product design. • Understand CAD/CAM/CAE principles to solve real-world engineering design problems. • Develop sketches and 3D models with NX modules. • Build assemblies and perform motion analysis to validate design functionality. • Generate CAM toolpaths and manufacturing strategies • Apply simulation workflows for structural and functional analysis	
Certification:	The participants, on successful completion of the above training, will receive joint certification from SIEMENS PLM & AKGEC.
