

AKGEC SKILLS FOUNDATION

Training Program Details

CENTRE NAME - NI LabVIEW Academy

Training/ Course Title:	Short Term Training Program on LabVIEW CORE I & II	
Target Audience:	Students	
Fee:	7000/-	
Duration:	40 Hrs.	
Module	• Introduction to the LabVIEW environment and basics of graphical programming. • Implementation of core programming structures such as loops, cases, and shift registers. • Data handling using arrays, clusters, charts, and graphs. • Fundamentals of file I/O for reading and writing data in applications. • Modular programming through creating and using SubVIs. • Basic analog and digital I/O operations using NI myDAQ hardware. • Introduction to NI myRIO for simple real-time data acquisition and control. • Application of design patterns and debugging techniques through a mini hardware-based project.	
Outcome:	• Develop applications in LabVIEW, including state machine design patterns, event programming, and programmatic UI control. • Read, write, and manage data, including binary file handling, queues, notifiers, and events for robust application behaviour. • Modify, optimise, and deploy stand-alone applications, enhancing usability and performance. • Gain recommended preparation for the Certified LabVIEW Associate Developer (CLAD) exam.	
Certification:	The participants, on successful completion of the above training, will receive certification by the NI LabVIEW Academy
