

AKGEC SKILLS FOUNDATION

Training Program Details

CENTRE NAME - NI LabVIEW Academy

Training/ Course Title:	Industrial Training Program on LabVIEW CORE I & II with Industrial Project	
Target Audience:	Students	
Fee:	11000/-	
Duration:	120 Hrs.	
Module	• Deep understanding of LabVIEW fundamentals and dataflow programming. • Advanced use of loops, events, timing functions, and error handling structures. • Extensive work with arrays, clusters, data visualization, and waveform processing. • Mastery of file I/O using text, binary, and TDMS formats for professional data handling. • Development of modular and scalable applications using SubVIs and functional globals. • Implementation of advanced architectures such as State Machines and Producer–Consumer models. • Hands-on multi-channel data acquisition and control using myDAQ, myRIO, and NI-DAQmx. • Performance optimisation, advanced debugging, and completion of a full-scale LabVIEW project."	
Outcome:	• Develop structured, scalable LabVIEW applications using advanced design patterns such as State Machines and Producer–Consumer loops. • Implement event-driven interfaces, modular programming with queues/notifiers, and effective data handling across text, binary, and TDMS formats. • Perform multi-channel data acquisition and hardware control using NI myDAQ, myRIO, and NI-DAQmx while optimizing code through debugging and profiling tools. • Modify, deploy, and validate LabVIEW projects, strengthening CLAD-aligned proficiency and application reliability.	
Certification:	The participants, on successful completion of the above training, will receive certification by the NI LabVIEW Academy
